Skills

Communication skills, SQL, JavaScript, React.js, REST, PostgreSQL, Postman, Node.js, Git, GitHub, Express.js, Vercel, Deployment

Experience

City of Refuge Inc, Atlanta | Atlanta, GA Hackathon Team Lead | 09/2023

As a team lead for the Front End team for this hackathon, my main responsibility is to ensure that the website we build for City of Refuge has complete functionality based on the guidelines set forth.

Education

DigitalCrafts | Atlanta, GA Web Development | 07/2023

As a student at DigitalCrafts I embarked on a rigorous 6 month course learning everything from the basics of Front End development, to modern, feature heavy frameworks like React. I also learned Back End development languages, primarily SQL and PSQL. That all culminates in my ability to develop Full Stack applications that are accessible and mobile responsive in a rapid yet thorough work flow.

Certificates

DigitalCrafts Part Time Web Development

Projects

- Pokemon-React project: June 10th, 2023. Project Lead. This Project was a revamping of an early project I completed early on in the DigitalCrafts program. I utilized the PokeAPI and the Pokemon TCG API to create a React and Redux based application focused on searching for your favorite cards of your favorite Pokemon.
- IMDC film review app: May 12th, 2023. Co-Creator. This project focused on utilizing ES6 rendering engine and routing to create a website that pulled and pushed data into a database to display user reviews and to receive new ones. Utilized Bcrypt to ensure user passwords and secure data were stored safely in the database linked to the application.
- NextBook: July 22, 2023. Co-Creator. NextBook is an application that utilizes the NYT best seller API and a book search API to create recommendations based on your likes and interests. My primary focus was on building the server, database and functionality between front and back end.
